## EXECUTIVE SUMMARY

Computer Science Engineering fresher focused on Artificial Intelligence and Machine Learning, with internship experience in AI/ML model development, deep learning, and data-driven problem solving. Comfortable working with Python, TensorFlow/Keras, Scikit-learn, CNNs, and NLP techniques, and looking to grow as an AI/ML Engineer on real-world projects.

## TECHNICAL SKILLS

**Programming:** Python

**ML/DL Frameworks:** TensorFlow, Keras, Scikit-learn, OpenCV

**AI/ML Concepts:** CNN, NLP, Data Preprocessing, Feature Engineering, Model Training & Evaluation

**Tools:** Git, VS Code, Google Colab

**Soft Skills:** Problem Solving, Communication & Teamwork, Time Management, Adaptability

**Languages:** Tamil (Native), English (Proficient)

## PROFESSIONAL EXPERIENCE

### Postulate Info Tech — AI/ML Intern

15 Jun 2026 – 29 Jul 2026

- Worked on AI/ML projects covering data preprocessing, model building, and evaluation
- Applied machine learning algorithms to real-world business problems using Python and common ML frameworks
- Supported data analysis, model training, and deployment tasks in a live project setting

### Marcello Tech — AI & ML Intern

15 Jun 2026 – 14 Jul 2026

- Completed a one-month internship programme in Artificial Intelligence & Machine Learning, certified by Marcello Tech
- Practiced core AI/ML concepts such as model building, training, and evaluation using Python
- Applied deep learning and machine learning techniques to practical problem statements as part of the programme

### Adroit Technologies — IBM Cognos Analytics Intern

Mar 2026 – Apr 2026

- Built business intelligence dashboards using IBM Cognos Analytics
- Analysed and visualised data to generate reports and business insights
- Explored Cognos features including data modelling, report creation, and dashboard customisation

### Digisailor — Full Stack Development Intern

Dec 2024 – Jan 2025

- Developed and implemented the dashboard module for a mini e-commerce web application
- Built responsive UI components using HTML, CSS, and JavaScript for product and order display
- Ensured cross-browser compatibility and took part in code reviews to improve code quality

## PROJECTS

### Crop Disease Prediction using CNN | Python, TensorFlow/Keras, CNN, OpenCV

- Building a deep learning model with Convolutional Neural Networks (CNN) to identify and classify crop diseases from leaf images
- Handling image preprocessing, data augmentation, and model training to improve prediction accuracy
- Aiming to deliver a practical AI solution that supports early disease detection and better agricultural decisions

### Email Classification using Machine Learning | Python, Scikit-learn, NLP

- Built a machine learning model to classify emails, such as spam vs. legitimate, using text preprocessing and feature extraction
- Applied NLP methods including tokenization and TF-IDF vectorization to convert email text into model-ready features
- Trained and evaluated classification algorithms to achieve reliable prediction accuracy on unseen data

## EDUCATION

### Bachelor of Engineering – Computer Science Engineering (Pursuing)

Dr. G. U. Pope College of Engineering | Expected Graduation: 2026–2027
